

Using Acrobat Distiller 6 to distil Postscript files to PDF

These guidelines should be followed when distilling Postscript files using Adobe Acrobat Distiller 6.

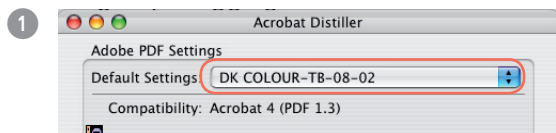

Part Two (Method 3)

After Postscript files have been created, as per the guidelines in part one (methods 1 or 2), it is necessary to distil them to PDF using Adobe Acrobat Distiller. When using Acrobat Distiller version 6 you will need to install the following software component provided by the Penguin Group UK:-

 **1** Distiller.joboption: **DK COLOUR-TB-08-02.joboptions** - This job option is to be used for distilling PostScript files. To install this simply drag the job option file over the Distiller window.

Before distilling the postscript files, check the distiller job option named "DK COLOUR-TB-08-02.joboptions" has been loaded into Distiller's settings.

We recommend that you create batches of Postscript (PS) files then distil all these in one go by dragging them over the Distiller window. This is a much more efficient way of working than going through the whole process of generating PS then distilling to PDF for each Quark document.

Launch Acrobat Distiller and select the custom preset job option. All PDF's must be created using these settings (as shown).
