Using Acrobat Distiller 4.x to distil Postscript files to PDF
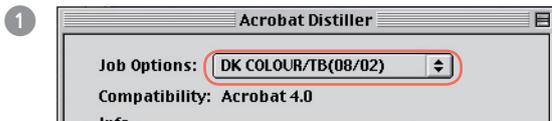

These guidelines should be followed when disitilling Potscript files using Adobe Acrobat Distiller 4.

After Postscript files have been created, as per the guidelines in part one (methods 1 or 2), it is necessary to distil them to PDF using Adobe Acrobat Distiller. When using Acrobat Disiller version 4.x you will need to install the following software components provided by the Penguin Group UK:-

1 Acrobat Distiller StartUp: **PrinergyForDistiller** - This plug-in software for Acrobat Distiller 4.x must be installed by double clicking the installer provided.

2 Distiller .joboption: **DK COLOUR/TB (08/02).joboptions** - This job option is to be used for distilling PostScript files. It is installed inside Adobe Acrobat 4 / Distiller / Settings

Before distilling the postscript files, check the PrinergyForDistiller Start Up Plug-In has been installed using the installer provided and the distiller job option named "DK COLOUR/TB (08/02).joboptions" has been copied inside Distiller's settings folder:- (Adobe Acrobat 4 / Distiller / Settings)

We recomend that you create batches of Postscript (PS) files then distil all these in one go by dragging them over the Distiller window. This is a much more efficient way of working than going through the whole process of generating PS then distilling to PDF for each Quark document.

1

Launch Acrobat Distiller and select the custom preset job option.
All PDF's must be created using these settings (as shown).
